

Respected sir/madam,

I am Achyuthuni Sri Harsha, I have finished my B.Tech, Mechanical engineering in June 2017 with distinction from Amrita university, which is rated as the number 1 private university in India by many international and national rankings.

I have got two campus placements, namely MuSigma and Tata Technologies(Design engineer), but due to various personal reasons I am looking for other core jobs.

I am a certified CREO(Pro-E) designer. I also have done analysis in both FEM and CFD extensively using ANSYS.

I am also well versed with modelling in Auto CAD, and in this context I like to present a video I made, when I was in my first year of engineering at NFC, Hyderabad, which shows modelling of a pilgering die and its parts.

I have published a paper, "Parametric study of

cantilever plates exposed to supersonic and hypersonic flow". The paper is of a two way FSI problem done using ANSYS. I have also done internships and training at NFC, Hyderabad, BHEL, Hyderabad and NTPC, Ramagundum.

I have attached below my resume for further information.

Thanking you

Yours sincerely
